

TGAP edge-time attribution: impact of removing one edge from one snapshot
 synthetic_3community, model=PersistenceTemporalModel - showing 22 of 139 edges (61 of 224 edge-time observations)
 DISPLAY-ONLY selection: largest |impact| at any snapshot, then snapshots present, then edge id. Deterministic, never sampled.
 Complete attribution: attribution/edge_time_attribution.csv. Snapshots with any non-zero response: 4
 TGAP edge-time attribution is shown here; this visualization is inspired by temporal XAI visualization
 styles but is not a TSHAP implementation. No additivity across time is claimed.
