

TGAP: Temporal Graph Additive exPlanations

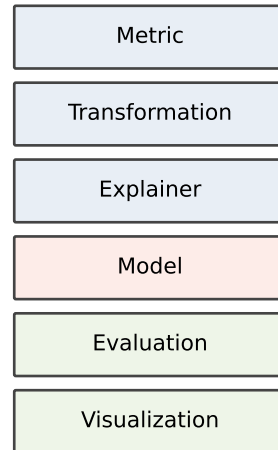

Layers

-  TGAP core - independent of any model
-  Model implementation (e.g. TGN) - replaceable
-  Evaluation / publication layer

The explainer requires ONLY this interface.
No gradients, hidden layers, attention weights,
memory internals or model-specific attributes.

Components

Any object providing predict(temporalGraph) -> float can be explained; TGN is one such implementation, not a requirement.
